

Case Study Of Online Events Booking

Project coordinator's Name:- Er.Akhilesh kumar

Trainee's Name:-

Enrollment No:-

1. Introduction:-

Attendees can register to your events online. Depending on how the event has been setup this can include travel and accommodation pre-booked reservation selections or just a simple area to list travel and accommodation preferences.

One time or recurring events are being set up by people, companies or organisations for various gatherings all over the world all the time. In many of these cases, the event is limited by the number of participants that can participate and in such case it is important that people reserve their place. Very often, the organizer may also want to accept payments from the participants and then, an online appointment scheduler can be very useful, because people can pay at the same time they make a booking.

The SimplyBook.me booking system is extremely flexible and allows event organizers to create a booking website, where clients and participants can come and reserve their places. They can also pay and give more information about themselves during the booking process. It is also very simple to set up multiple or recurring events.

2.Objective:-

Event booking system features. Send automated notifications to your attendees for booking confirmations, SMS event reminders and feedback. Setup and manage events with our online event booking software. Publish events at set times – including the event description, location, and price.

2. Admin Zone:-

The first page of admin should works as a dashboard.Admin is a person, with full Authentication .

It can block users. It can add new user. Admin can directlyview feedback of users and contact query.

Admin can manage each and every thing related to thisportal.

Conclusion:-

One of the main benefits of online booking systems is that they allow customers to place their booking at a time that is most convenient for them. Using an online booking system, they can make their booking at any time of day or night, without having to worry if it's within event hours or not. If you think about it, customers are much more likely to make a booking in the evening, as unlike when they are at work, they will have more time to surf the internet at their leisure.
